About this document

This analysis shows what percentage of the grades 3-8 NYS state math exams have tested each standard on average, for each of the 2018, 2019, 2022, and 2023 NYS state exams. Further, it shows which lessons on the Illustrative Math curriculum address those standards, and what share of the total lessons they constitute.

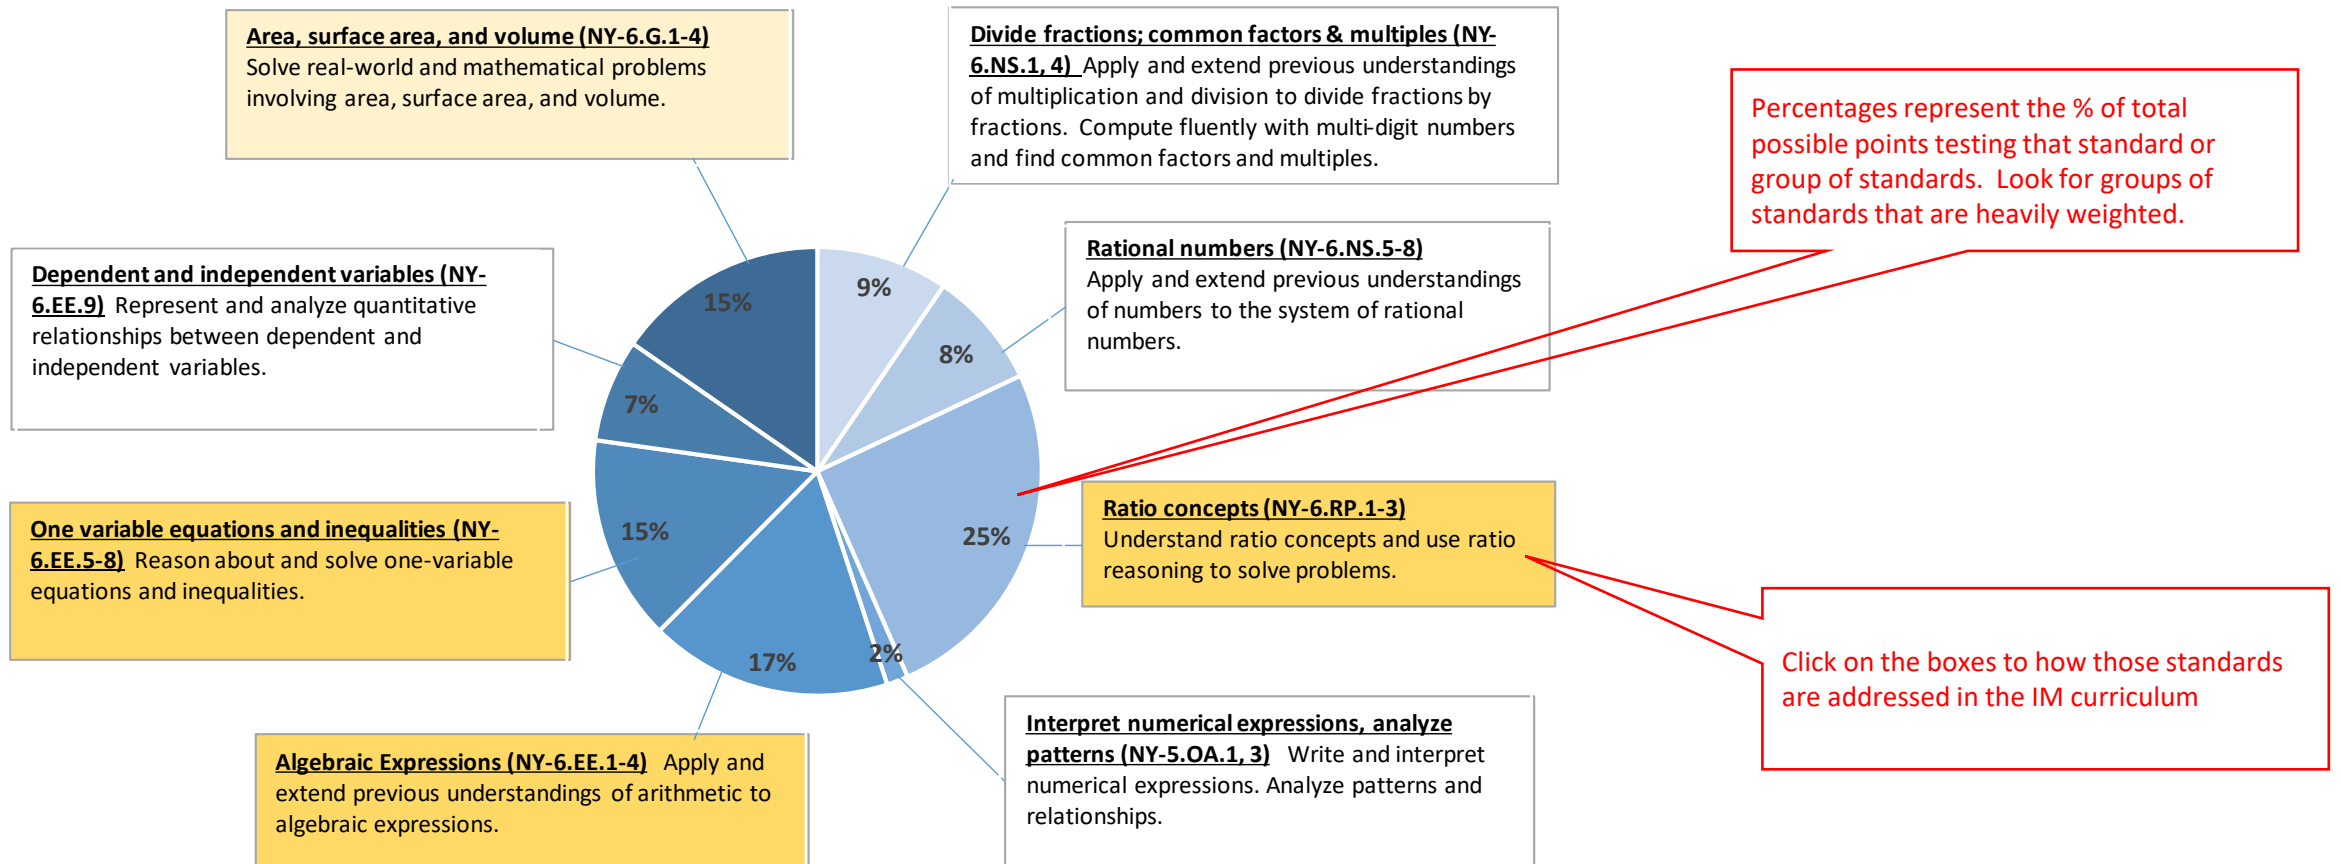

Who is this document for?: School leaders, math teachers, and instructional coaches

How can this document help you?: This can aid school leaders and teachers in planning with the new (for some schools) curriculum. The document is linked for easy navigation.

Where does this information come from?: NYS exam weights are from District Public's analysis of past NY state exams available from the NYSED [here](#). Alignment with IM curriculum are from District Public's analysis of IM math curriculum, available [here](#).

Review the full text description of the standards

Compare the # and % of total lessons in the IM curriculum covering this group of standards, with the historical weight of the exam for the group of standards highlighted in yellow. While alignment with the state test is just one of many considerations guiding when to teach specific lessons, teachers should note where there are many lessons covering a standard not frequently tested on the exam, or a frequently tested standard is not well covered in the curriculum.

Standard	Description	Illustrative Math - Lessons *	# Lessons	Pct of Total Lessons	Historical Exam Weight	Prior Grade Standard(s)

Note that the number and % of lessons covering an *individual* standard (vs. a *group* of standards) may not be comparable, since lessons may cover multiple standards and thus the # and % of total lessons covering a standard will likely exceed that standard's weight on the exam, where each question is tagged to only one standard.

Take note of the prior grade standards – standards foundational to the standard indicated. Students will need a strong grasp on these standards to excel on the grade level standard.

* Only unique lessons are counted within the standard group summary. Since multiple standards can be covered in a single lesson, the total number of lessons shown for a given standard group may not match up with the total of the lessons by standard shown.

NY-7.SP.5	Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood.
